

1. Submit a pdf or word document to describe the technology, programming languages, or any other components that you utilized. Also, please provide references to any online source code snippets or examples that you utilized.

The programming language used was Django which uses python and html to create your website. It also has a built-in database. I used Pycharm to write all this code out.

2. In case you are unable to complete the application, provide your zipped source code and also submit a word or pdf document explaining your attempt and what went wrong in the process. Adding as many details about your attempt will help me to grade your attempt accurately.

I could not figure out how to do two things that you asked us to do. That was allowing the user to sign in with their email address and allowing the user to enter their birthdate when registering. Besides those two things everything else works well. I was able to print the users email, first and last name, and username to the welcome page screen. Also, I can register a new user into the database and I can log in a user and the database will know who is being logged in.
